TEN TEACHERS FROM INDONESIA INSPIRED TO JOIN HONEYWELL EDUCATORS @ SPACE ACADEMY

*205 teachers from 24 countries will attend the 2015 program;
More than 2 million students reached and inspired by 2,381 math & science teachers
from 55 countries since 2004*

JAKARTA, MAY 27, 2015 - More than 200 teachers from around the world, including 10 from Indonesia, are gearing up to take the trip of a lifetime to [Honeywell Educators @ Space Academy](#) (HESA), the game-changing experience that inspires teachers to encourage students to pursue science, technology, engineering and math (STEM) education and careers.

Created in partnership with the U.S. Space & Rocket Center (USSRC), Honeywell (NYSE:HON) developed the award-winning scholarship program to help middle school math and science teachers become more effective educators in STEM. Over the past 11 years, Honeywell has awarded scholarships to 2,381 teachers from 55 countries, including 16 from Indonesia.

“Inspiring students begins with inspiring our teachers and this program is all about re-igniting passion in our teachers,” said Michael A. Bennett, President, Honeywell Hometown Solutions, the company’s corporate citizenship initiative. “This experience helps teachers learn new techniques for cultivating curiosity for math and science in the next generation of engineers, programmers, mathematicians and astronauts.”

According to the U.S. Department of Commerce, in the last 10 years, the demand for STEM-related jobs grew three times faster than jobs in other fields. However, according to the U.S. Education Department, only 16 percent of high school seniors are considered proficient in mathematics and interested in a STEM career. Only half of those students who pursue STEM courses in college actually go on to careers in STEM fields.

“I am excited to see a growing number of finalists from Indonesia this year, the most we have ever had! This indicates the increasing interest in space and technology from Indonesia and extends the impact of our program to Indonesia’s education system,” said Alex Pollack, president of Honeywell Indonesia. “We hope the momentum will continue and that our program will benefit more teachers and students, and eventually this will bring a boost to the country’s education level, especially in the area of technology.”

Since 2004, educators have shared their experiences and knowledge to more than 2 million students, inspiring many to pursue STEM education and careers. From winning grants from local and federal governments, to entering students in international and NASA

educational projects, to creating STEM-focused after school programs, the impact of HESA is continuing beyond the classroom.

This year, 205 teachers from 24 countries will attend one of two five-day programs offered over consecutive weeks from June 10-23 at the USSRC in Huntsville, Ala. Teachers will be given rigorous training focused on science and space exploration including astronaut-style exercises like high-performance jet simulation, scenario-based space mission, land and water survival training, and interactive flight dynamics programs.

To attend Honeywell Educators @ Space Academy, candidates must complete a thorough application process. Qualified teachers are awarded scholarships, round-trip airfare, tuition, meals and accommodations sponsored by Honeywell and its employees.
