

EMISSIONS 360 SERVICES PROGRAM DETECT, BASELINE, REPORT & REDUCE

Honeywell

SERVICES FOR A LOW EMISSIONS FUTURE

Industrial organizations face unprecedented pressure to improve their environmental performance, reduce emissions and meet corporate sustainability guidelines and regulatory requirements.

They must cut costs while improving the accuracy and reliability of their measurements. Continuously improving operations means adapting to new challenges, optimizing asset

performance and increasing overall reliability – all while proactively managing plant emissions.

Honeywell's comprehensive Emissions 360 service program helps meet

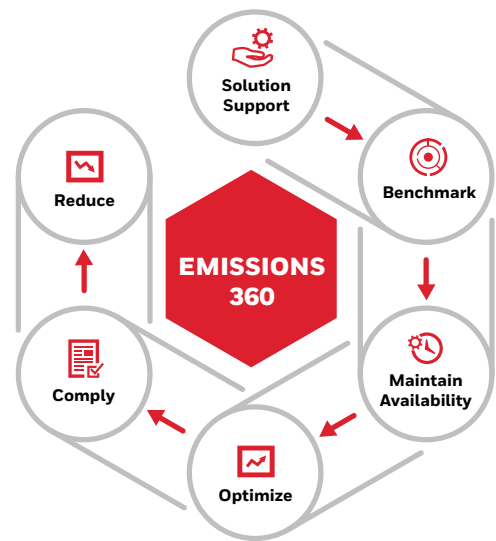

these challenges, providing enhanced support for integrated plant assets that lowers risks, reduces asset ownership costs, and supports improvements in business results.

HOW DOES IT WORK?

The Emissions 360 program baselines GHG emissions per OGMP 2.0 Standards and helps organizations track them in order to reduce them over time. A multi-pronged approach provides active monitoring from our Premium Support Center to identify product losses, drive corrective action, and keep emissions within prescribed levels to support compliance. It also can include regulatory reporting information. We help benchmark emissions and provide insights needed for performance improvements and participation in ESG value programs.

PAY FOR RESULTS, NOT PARTS AND LABOR

Emissions 360 services is developed to save labor and enable operators to redeploy resources to more value-added work. We deliver agreed service levels linked to defined KPIs, along with comprehensive system support, maintenance, optimization and change management.

FEATURES AND BENEFITS

As your strategic partner, Honeywell provides a single point of contact for support and resources needed to achieve defined outcomes, with payment adjusted to the results attained. Realizing business outcomes and lowering the cost of ownership occur via agreed KPIs to keep systems supported and available with comprehensive lifecycle management.

Transform your operations with an Emissions 360 Services Program built for your business:

- Measurable business results
- Lower cost of ownership
- Early identification of issues to prevent product losses and downtime
- Faster resolution of problems
- Predictive analytics to identify potential leaks
- Higher productivity and faster delivery

- Improved accuracy and availability for assets
- Optimized, systemic lower risks operations
- Integration with advanced process control and asset performance management
- Easier compliance reporting
- A single partner and one number for support
- Simplified change management
