Honeywell UOP Callidus 82,000 sq. ft. manufacturing and fabrication facility in USA

Global Coverage

Honeywell UOP Callidus reaches the global market through our headquarters located in Tulsa, Oklahoma, USA, with regional direct sales offices and independent sales representation around the world. Meeting our customers' expectations and setting the standards for the combustion industry have always been our goals. Each burner, flare, thermal oxidizer and catalyst system we design and manufacture is built with those goals in mind.

Test Facility

Honeywell UOP Callidus' test facilities in the U.S. and China are used for combustion technology research and development, as well as for customer demonstrations. Our array of test systems allow us to closely match actual field operating conditions, providing results that will more accurately predict actual measured performance.

In Addition to Installation Services, Honeywell UOP Callidus Offers:

- Ultra-low NO_x burners
- Flares, flare systems and flare gas recovery systems
- Thermal oxidizer systems
- Field services and parts
- CFD Modeling
- Training and schools

ISO 9001:2008 Certification

USA Certification

Installation Services

Installation Services

Honeywell UOP Callidus offers turnkey installation and aftermarket support for our products around the world. Our goal is to provide first class service from professionals who have years of experience with our equipment and understand how it should be installed and operated to obtain the highest quality and efficiency.

Our services include:

- Installation
- Guy Wire Tensioning
- Retractable Systems
- Supervision and Inspections
- Commissioning and Startup
- Servicing Tuning and Training
- Rental Fleet
- Spare Parts

Experience

Our installation team gets involved up front and stays involved throughout the project, including your Installation Coordinator, who's on the project from initial assessment through the end.. The Coordinator oversees the design and fabrication of your project so we can custom-make a product that fits your needs and meets the highest quality standards. When it's time to install, the Coordinator is there in the field with you to manage the job and ensure proper installation.

Project Management

Installation systems can be complex and time demanding. By allowing our highly skilled and dedicated team to do your installation, we assume the project management duties, allowing you to focus your efforts elsewhere saving you time and money.

Budgeting

Are you tired of getting hit with exaggerated back-charges on every job? We know our product better than any other installer and when we give you a firm price, which will likely be your final price.

Guyed Stacks

Quality

Depending upon the project, we build our installation team from four different sources:

1. Honeywell UOP Callidus employees.
2. Tulsa based contractors.
3. Vendors local to the end user.
4. Customer-preferred vendors that are pre-qualified to work in the end users plant.

Reporting

We will provide you with schedules, scope definitions, progress and completion reports to fulfill all of your company reporting needs and to ensure you are aware of installation details.

Modularization

Ever request a 125'-0" tall stack to be shipped fully assembled complete with ladders and platforms? We've done it. We don't want to be the critical path during your shutdown so we will look aggressively at ways to shorten the installation time in the field through modularization or other simplification of installation.

Demountable Systems

Burners

Vapor Control Systems

Derricks

Thermal Oxidizers

Identify and Resolve Unexpected Surprises

Our experience with our products, systems and the related equipment allow us to spot potential problems in the field with our customer's equipment. Sometimes during installation, demobilization or rework, items are spotted that demand immediate attention. Our coordinators can also advise or refer our clients on items such as spare parts and service on other equipment.

Eliminate Back Charges, Misfits and Missing Parts

With a Callidus coordinator on site during installation, all of these problems are solved instantaneously. Back charges, misfits and missing part problems are resolved behind the scenes to avoid undue stress or missed turnaround deadlines.
